We need some calculations on the rototox data that are summarized in the SAM table (long form).

- We need to provide the percentage of "usable data." I would classify this as results that are not identified as data pending, data rejected, and technical difficulties not tested because rotifers did not hatch. In other words, we need to assume that any data that do not fall into these 3 categories is "usable."
- We need a breakdown of the percentage of rototox results that fall into each of the following categories: data pending, data rejected, technical difficulties...
